

# IMAGE indexing?

## *Yes, Adager supports HP's B-Tree indices*

See for yourself how easily we do all kinds of magic with IMAGE's intrinsic indexing data structures.

There is no need for you to fiddle around with tasks that are best left to the computer. For instance, we automatically take care of maintaining (and rebuilding, when necessary) your B-Trees as a result of *any* Adager modification.

Adager has excellent *diagnostics* that detect illegal conditions in your IMAGE/SQL databases (and TurboIMAGE or IMAGE/3000).

Adager, of course, also has legendary database *therapy*. Thanks to IMAGE's robustness, you may never need to use Adager's therapy, but it is nice to know that you have it available.

All of this *without tier-based pricing*, so you will not feel like you were hit by a tree when you upgrade your HP3000 to the latest symmetric multiprocessor version.

Are *you* ready? What are you waiting for?
