

Show off the data on your hp3000

Converting the data in your databases into business-useful information is the most important thing that you'll ever do on your hp3000. This is the point where all of your prior investment pays for itself.

Downloading data into PCs is proving to be no salvation. It's a more difficult task than anyone initially imagined. But even when you get it to work, you're bound to be disappointed.

The problems are legion. Machine overloads are increased, often dramatically. Response times are often terrible. But worse yet, reports must be manually run every time. Automated runs are almost impossible to set up.

QueryCalc dispenses with all of this and makes life simple again. It requires only an hp3000, a terminal and a printer.

If you have a dumb printer, you get standard output. But if you have a PostScript color printer, you can get reports that look like this page, with graphics, logos, and all. Yes, directly from your hp3000.

In fact, we are so impressed with QueryCalc that we are incorporating it into all of our Adager customer communication systems.

We will then be able to take full advantage of our networked

hp3000 computers and our fleet of PostScript printers.

QueryCalc is a magnificent product, simple and elegant: spreadsheet, graphics & query language, completely self-contained, amazingly efficient, and wholly resident on the hp3000. It will forever change the way you perceive your hp3000. As *Interact Magazine* said in November, 1994, "Performance in QueryCalc is nothing short of stunning... The output generated with PostScript is truly amazing. You can get some beautiful output with almost zero overhead..."

So, now you have the best of every class within the robust and reliable environment of your hp3000. You have the unmatched

flexibility that Adager offers you to manipulate the internal bits and bytes of your IMAGE/SQL databases and you have the stunning capabilities of QueryCalc to bring those bits and bytes to life in full graphic color and vivid splendor.

Adager, among other things, is abstract algebra of the highest caliber. QueryCalc, among other things, is a beautiful geometry.

This is a mathematical match made in hp3000 heaven. If you have one, you should have the other. Nothing less will do. Impress your friends. Go and show off. You have it. Flaunt it!

For further information on QueryCalc, contact Jane Tuthill at AICS, Inc., (505) 524-9800.
